Penang, UTM in Johor Bahru.

Financial services

Engage with your agents, brokers, employees, and customers to

create business value

Software Malaysia helps financial services firms increase customer profitability by providing easy and affordable means for reaching, engaging, and retaining customers while reducing internal processing costs.

Any process that drives business for a financial firm has an impact on its customers' experiences, but special attention needs to be paid to those processes that actually "touch" the customer, whether applying for a service online, talking to a call center representative, or meeting face-to-face with a bank teller or financial advisor. Even a single negative experience will make it that much more difficult for the firm to engage with that customer later.

Software Malaysia makes it easier and more profitable for financial services firms to successfully engage with their customers by delivering convenient, satisfying, and consistent communications and transactions across all channels of interaction: web, ATM, e-mail, call center, in-branch.
